On behalf of our client in the **Lower Mainland, Ignite Technical Resources** is looking for a **Senior JavaScript Developer** to join their team for a **3-month contract** with strong possibility of extension.

The Role: You will be an integral part of a cross functional team designing and developing an analytic and visualization platform based on Redux and React JS, participate in UI architecture, framework and web services decisions.

Responsibilities:

- Minimum of a B.S in Computer Science
- Strong knowledge of Javascript
- Experience in ES6/7, ReactJS, Redux, AJAX, NodeJS, Webpack, Bootstrap
- Solid understanding of the Design Patterns, WebSockets, WebRTC, Web Services (REST, JSON, WSSecurity, SSL).
- Experience with unit tests, integration tests, performance tests, etc.
- Good understanding of security concerns and context
- Ability to design and articulate solutions and follow up with clear documentation.
- Strong analysis, design and modeling skills
- Team player, must be able to manage multiple tasks simultaneously

Mandatory Requirements:

- Ability to balance workload to keep multiple projects progressing to completion.
- Ability to thoroughly understand technical issues and provide solutions to resolve issues.
- Technical design, implementation, deployment and support of application solutions
- Partner with the Architecture team to ensure track work is aligned with the strategic direction of the enterprise
- Provide guidance around best practices on UI design and architecture.
- Adhere to architectural standards, and detailed development standards.
- Review service designs, source code, and research options and create recommendations to ensure a successful implementation
